

## ABSTRACT

An ignition gun with safety switch comprising a hollow body with a safety switch near center, the safety switch consists of a body and a pressing part, the pressing part is placed freely onto the top of the body to move forward or backward; a  
5 brake bar installed freely inside the pressing part to prevent the pressing part from moving forward, a brim of the hollow body locates corresponding to the connection of the safety switch, the brim blocks a pressing brim on the bottom of the pressing part to prevent the safety switch from being pushed down; while ignition, users have to move the brake bar to the blocking position and push the pressing part forward, the  
10 pressing brim then moves away from the brim enabling users to press down the safety switch to ignite the flame for safer and more convenient purpose.
